SUZUKI SV 650 2016+	ENGINE SPOILER	ES-SSV650B

## CONTENTS

- 1 X bracket (L-SGAD1)
- 2 X brackets (L-SGAD2)
- 1 X bracket (L-YTDM3)
- 4 X allen flat top screws M6X20
- 4 X M6 clips
- 4 X rubber rings M6
- 1 X M6X40 allen screw
- 1 X adaptor 6X12 -9mm

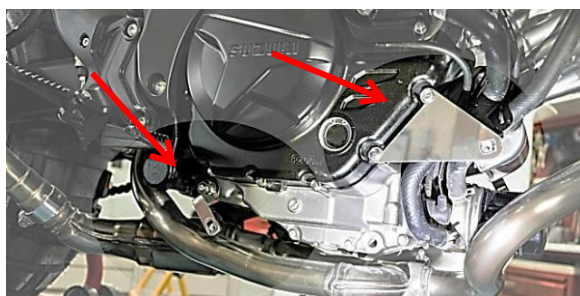

### LEFT SIDE

Tighten clips on the brackets.

Place the brackets as indicated in the picture.

For the backside brackets first you need to remove the safety switch of the stand and then remove the engine screw (it's the screw that holds the engine in place) so that you can slide them through together with the bracket. Do not tighten before you have aligned them right.

### RIGHT SIDE

Repeat the same on the right side. The hind bracket will also be placed together with the engine screw. On the front bracket you will use the screw included in the package as well as the adaptor.

Remove the spacer that is found inside the rubber ring and place the rubber part on the holes of the guard – then place again the spacers inside the rings.

Try the guard and make sure that all brackets are in the correct position. Align and tighten well.

Put the guard in position and tighten the screws. Make sure first everything is in place.
