

INSTRUCTIONS

MODEL : KTM SMT 990
PRODUCT : REAR HUGGER
CODE : RH-KTMSMT

CONTENTS

Plastic fender
2pcs. M6x15 allen bolts

MATERIAL SPECIFICATIONS

The product's material, made of **ABS** plastic with acrylic exterior layer, can be placed on your bike without requiring painting but if you want it painted, all paint companies have equivalent machinery at their disposal. If you want to paint it yourself, you should contact them to inform you on what you will need and how to do it.

Placement

OUR COMPANY SUGGESTS THE INSTALLATION BE CARRIED OUT AT A WORKSHOP OR BY QUALIFIED STAFF

- Clean well the area around the swing arm and the chain guard and remove the rear wing. Also remove the rear brake tube (Photo No 1).
- Unscrew the rear wing from the chain guard.
- Bolt the new wing on the same spot.
- Place the wing and make sure that on the right side it slides beneath the rear brake tube.
- Screw the new bolts on the front side and reposition the rear brake tube while holding them together (Photo No 2).
- Before tightening the bolts, make sure the fender is positioned correctly (centered to the wheel).
